

SKIN HEALTH AND DELIVERY SYSTEMS

SKIN HEALTH & DELIVERY SYSTEMS

Vantage™ has developed several technology platforms which offers customers a wide variety of solutions to address consumer needs for efficacy and visible results.

The Vantage™ range of skin biomimetic ingredients and natural extracts has been curated to address critical skin disorders and beauty users concerns.

The Vantage™ sun care platform harnesses the power of inorganic sun filters to provide efficient protection against sun exposure.

To help manufacturers handle hazardous or hard-to-formulate ingredients, Vantage™ has developed proprietary high-performance dispersion technologies (High Pressure Milling) to help break large particles aggregates and facilitates their incorporation in formulations.

Finally, Vantage™ encapsulation technology is a way for formulators to combine skin care benefits and impactful visual effects in their cosmetic products. These encapsulated ingredients can be customized to meet brands' needs for visual and claim differentiation.

Vantage™ offering:

SKIN BIOMIMETIC 3

NATURAL EXTRACTS 4

HUMECTANTS 5

MINERAL UV FILTERS 6

UV FILTER DISPERSIONS 7

Vantage™ Encapsulants are visible, innovative, spherical particles offered in a wide variety of sizes & colors, entrapping different ingredients within a shell or matrix. The ingredients are released from pressure during application, when rubbed on the skin or passing through packaging components with a pump. They provide unique visual appeal to personal care and cosmetics products – enhancing the appearance of a product while drawing attention to its active ingredients and improving a consumer's experience when using the product. They are ideal for use in a broad range of applications – including cleansers, skin care, hair care, sun care and hand sanitizers.

Lipobead™ products are a delivery system technology platform based on a matrix-type encapsulation process in which the encapsulated material is dispersed within a uniform spherical semi-solid matrix of mannitol (or lactose), cellulose and hydroxypropyl methylcellulose colored by pigments. The Lipobead™ product line is designed to hydrate after 4-6 hours in an aqueous formulation to facilitate trouble free processing in high shear filling operations. (available in average sizes of 700 microns and 1500 microns)

Lipospheres™ products are a delivery system technology platform based on a matrix type encapsulation process in which the material to be encapsulated is dispersed within a polymer matrix, typically derived from agar, a seaweed extract, that can be colored by pigments. The Liposphere™ product line is supplied as a slurry and can be incorporated easily into your formulations. (available in sizes ranging from 400 microns average up to 3000 microns average)

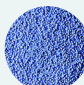

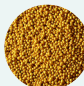

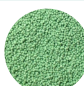

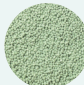

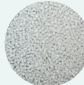

Lipocapsules™ products are a true core/shell type microencapsulation technology characterized by a clear, non-pigmented shell surrounding a single droplet or particle of a hydrophobic core material with or without a color. Contact us for custom development. (available from 10 microns average up to 3000 microns average)

InstaMask™ products are an innovative all-in-one clay mask bead technology that will transform into an easy-to-use clay mask when mixed with water. InstaMask™ granules can function as a customizable delivery system, delivering and protecting your active ingredients. You can select actives that have traditionally been difficult to formulate with because they will not need to have stability in a traditional product form.
